

Cloud Platform Suite

- ✓ Converting switching centers into cloud datacenter at the smallest cost
- ✓ Cloud service infrastructure unifying IT and NW for global carriers
- ✓ Highly reliable and efficient packaged platform consisting of servers, storage, switch, software and air-conditioner

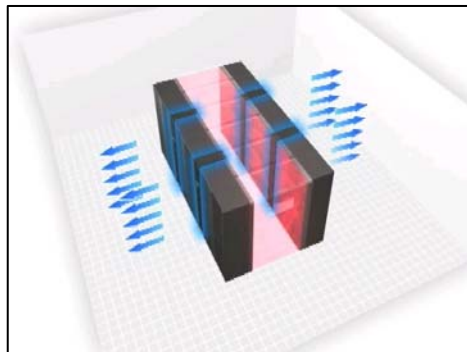

Advantages

■ Making the best use of facilities in existent switching centers

- DC-48V power supply unit which is not only the standard of telephone switching centers but also more helpful to energy saving than AC power supply
- High Dense implementation to be helpful to use vacant space effectively
- Rack-type air-conditioners to cover existent built-in air-conditioners

■ Environment-friendly

- HACS (Hot Aisle Containment System), efficient cooling system to enclose hot air and cool it intensively, to enable up to 60% cooling cost reduction

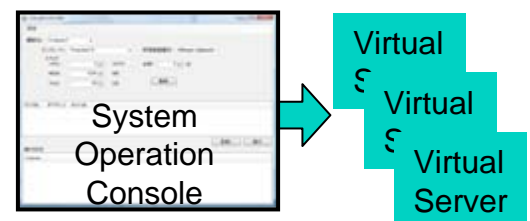

- Energy saving hardware to reduce power consumption by up to 54%

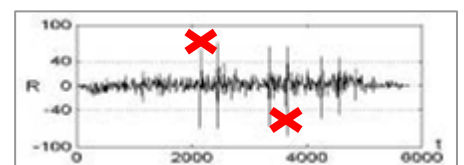

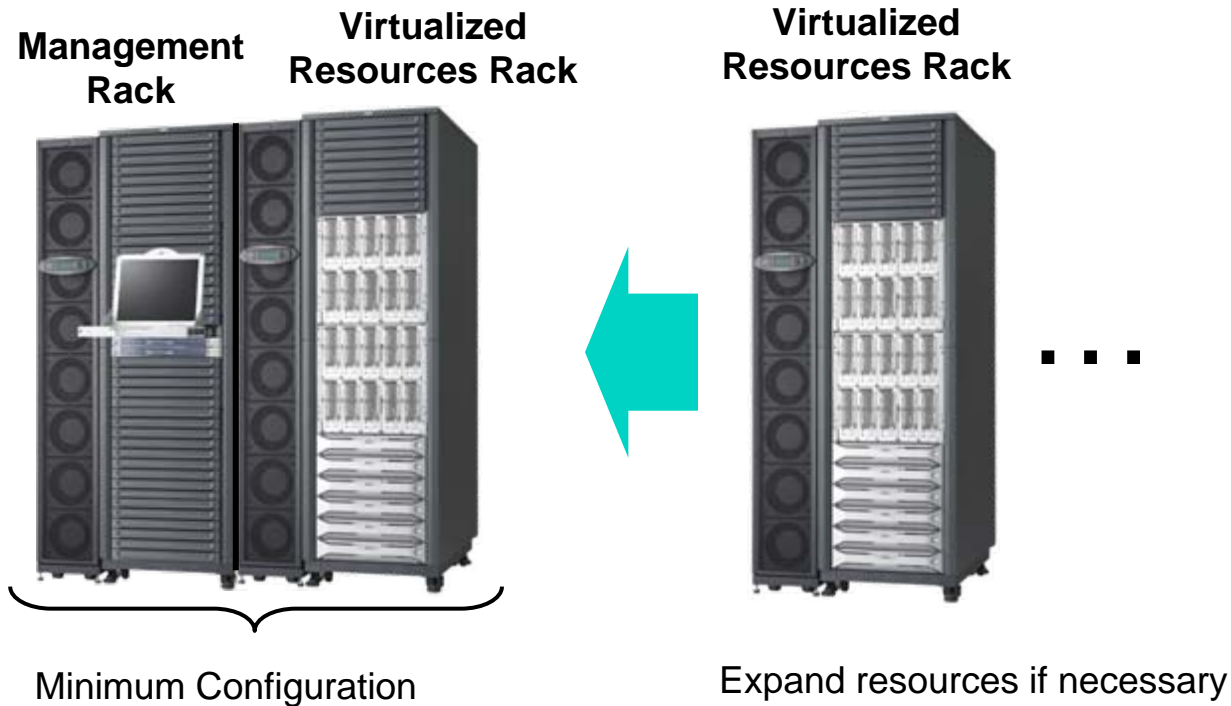

■ Easy integration and Operation to be useful to cost reduction

- Pre-integration (installing basic software, typical configuration...)
- Operator-friendly virtualization and automation software

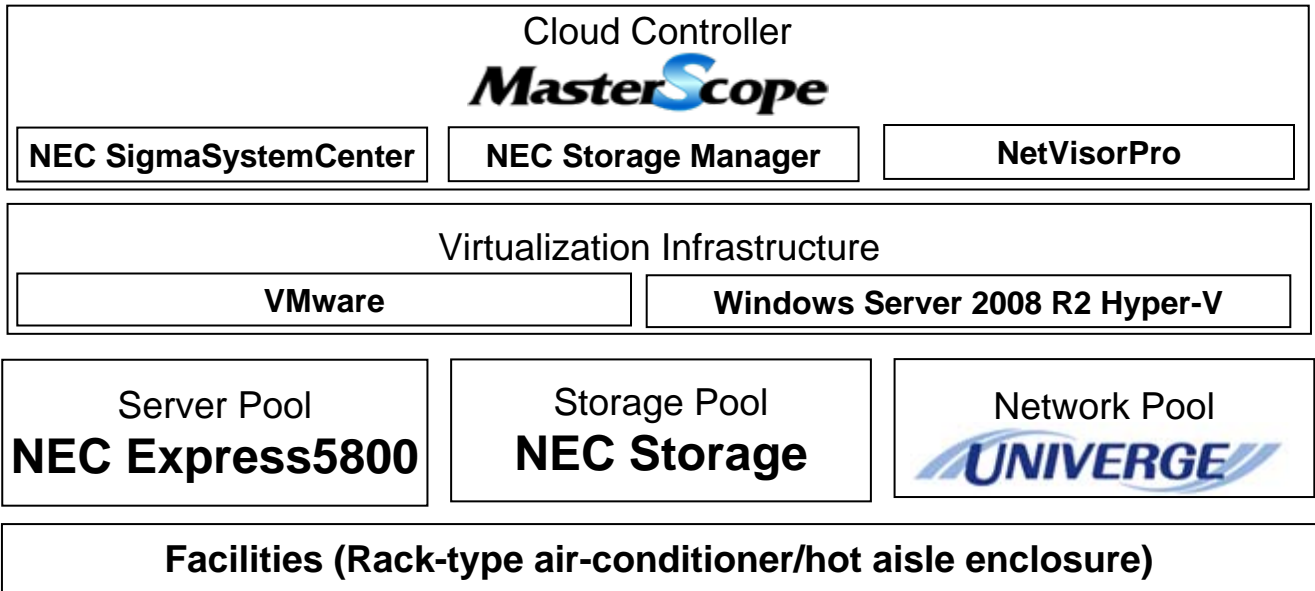

- Predictive fault analysis to detect and to identify silent problems
