The MN5200 is a new product based on Pseudowire over T-MPLS/MPLS-TP technology; it has been developed to overcome the data traffic consuming at most carrier’s bandwidth in current SDH/SONET based infrastructure. As a convergence transport technology, the MN5200 is the key fact for today’s metro network carriers and services providers. Equipped with enhanced data service processing capability and powerful network management function, the MN5200 can provide all-round network solutions at the access layer and aggregation layer of a Metropolitan Area Network (MAN), enormously reducing the operation cost. While MN5200 will mainly be positioned as User Provider Edge (UPE) at metro network, NEC also introduces the MN5300, which can be applied in both UPE and Network Provider Edge (NPE) solutions. For more detailed information on MN5300, please refer to its documentation data.

**LAYE ARCHITECTURE**

With MN5200, the Ethernet, TDM (E1/T1 - SDH/SONET) or ATM payloads are transported over the Pseudowire layer, where the payloads can be encapsulated and multiplexed/de-multiplexed into a single T-MPLS/MPLS-TP tunnel. T-MPLS/MPLS-TP layer provides the transport tunnel for the traffic been transferred across the IP/MPLS core network. At physical layer, the MN5200 can use Ethernet and/or both SDH/SONET transport technologies. The architecture of MN5200 is described in the figure below:
### Technical Summary

#### HARDWARE

<table>
<thead>
<tr>
<th>DIMENSIONS</th>
<th>133(H) x 440(W) x 410(D) mm (3U)</th>
</tr>
</thead>
<tbody>
<tr>
<td>WEIGHT</td>
<td>11kg (empty) / 21kg (full)</td>
</tr>
<tr>
<td>TEMPERATURE</td>
<td>5 °C to 40 °C</td>
</tr>
<tr>
<td>POWER SUPPLY</td>
<td>- 48V DC</td>
</tr>
<tr>
<td>Max.POWER CONSUMPTION</td>
<td>Less than 300W fully loaded</td>
</tr>
<tr>
<td>HUMIDITY</td>
<td>5% to 85% non-condensing</td>
</tr>
</tbody>
</table>

#### INTERFACE

<table>
<thead>
<tr>
<th>TYPE</th>
<th>PORTS per MODULE</th>
<th>MAX. PORTS per CHASSIS</th>
</tr>
</thead>
<tbody>
<tr>
<td>STM-64 POS</td>
<td>1</td>
<td>4</td>
</tr>

<td>16 with protection</td>
</tr>
</tbody>
</table>

#### PROTECTION SCHEME

- Hardware redundancy: 1+1 power supply, 1+1 OPCA card (OAM, clock processing and switch fabric), 1:1 E1/T1 Card Failure Protection (CFP)
- Network Protection: 1+1 Linear MSP (ITU-T G.841 Annex B) for STM-1 (ATM or SDH)
  - 1:1 Linear MSP for STM-1 (ATM or SDH); 1+1 Linear protection for LSP
  - 1:1 Linear Protection for LSP

#### TIMING/SYNCHRONIZATION

- POS interface: Line timing and SSM (S1 byte) transmission
- GE/10GE interface: Line timing and SSM (control frame) transmission
- Free run: ±4.6ppm (ITU G.813)
- Holdover: ±0.05ppm within 24 hours
- Provide sync signal for 3G Base Station: External timing output
- Traceable STM-1 ATM interface as line timing source

#### NETWORK MANAGEMENT

SpectralWave MN9200(EMS), LCT (Local Craft Terminal)

#### STANDARDS & RECOMMENDATIONS

- ITU-T: G.8110, G.8110.1, Y.1711, Y.1720

---

⚠️ Safety Precautions

- Before installing, connection or using this product, be sure to carefully read and observe the cautionary and prohibited matters provided in the instruction manual.

#### Data Packet Processor

- **Packet Processing Capacity**: 88Gbps full duplex switching fabric

#### T-MPLS/MPLS-TP Features

- 8K MPLS label per MN5200 Chassis (Shared by PW/LSP)
- EXP-Inferred-PSC LSPs (E-LSP)
- Label-only-Inferred-PSC LSPs (L-LSP)
- Per platform Label space support
- Bi-directional T-MPLS/MPLS-TP trail and Uni-directional T-MPLS/MPLS-TP trail
- Diff-Serv support:
  - 2 service levels for TDM Emulation (E1/T1, SDH/SONET)
  - 4 service levels for statistical multiplexing traffic (ATM)
  - 8 service levels supported in the Network (Data Service)
- MPLS OAM including protection switching
- Virtual Circuit Connection Verification (VCCV)
- LSP TraceRoute
- EMS/SNMS manually controls the setup and the release of PW and LSP
