

A Message for the Publication of “NEC Journal of Advanced Technology”

NEC has published the “NEC Research & Development,” an English technical journal introducing the company’s R&D efforts to the world for 44 years. Recently, however, companies - of course including NEC - have been improving their 21st-century style of new businesses, and we have accordingly decided to launch this new “NEC Journal of Advanced Technology” for the purpose of supporting such business style. This journal also adopts the new style and aims to meet our global customers’ demands.

It will offer more information than its predecessor about the NEC Group’s state-of-the-art advanced technologies, will introduce core technologies used for newly developed products, and will propose new systems and services.

The first two special issues of “NEC Journal of Advanced Technology” - Vol.1 No.1 and Vol.1 No.2 -, that offer our marketing message “Dynamic Collaboration,” introduce overviews and future trends of core technologies and products which are supporting “Dynamic Collaboration”; Vol.1 No.1 features ‘system technologies,’ and Vol.1 No.2 presents ‘hardware and platforms.’

NEC will continue to advance our business improvement to satisfy global needs. We hope that the “NEC Journal of Advanced Technology” will serve as a means of acquainting readers with our enthusiasm and competence, and in addition, that it will contribute to readers’ business activities.
