**MasterScope JobCenter**

**Automated execution of pre-defined tasks and job flows**

Flexible yet effective operational setup not limited to any system setup or operational requirements.

- **Flexible scheduling capabilities accommodating any organizational requirements**
  - Define a calendar with operational scheduling (such as system on/off days) fully reflected. Combine the calendar with the job scheduling to meet complex operational requirements.
    - Calendar: Define operational days of the overall system
    - Schedule: Define job execution days and times (e.g.) if the 3rd Monday of the month is a holiday, shift such Monday’s tasks to become active the following day for such month.

- **Define Setup**
  - (Green: Active, Red: Non-Active)

- **Listing view of active days of all job flows**

**Product Lineup**

<table>

Automating systematic tasks providing a smooth, hassle-free day to day business operations

Business operations are vulnerable under manual inputs often resulting in unexpected issues to occur. Also increase in workloads eminent on IT administrators as system expansions are unavoidable as business grows. MasterScope JobCenter can resolve such issues by reducing both cost and resource requirements by automating systematic tasks providing a safe yet reliable infrastructure.

Key Benefits

- **Operational Cost Reduction**
  - Flexible task automation depending on the operational setup and requirements of the customers.

- **Preventing Human Errors**
  - Intuitive controls and preset command objects allow a complex automation configurations to be created at ease preventing unwanted setup and execution errors.

- **High Reliability**
  - Solid track record from the numerous mission critical system installments in the past guarantees a high reliability performance within a distributed setup environment.

Operation Overview

Depending on the operational task involved, IT administrators can adjust and set required job flows with a fixed schedule allowing integrated monitoring at all times.

Key Features

- **Simple Workflow Defining**
  - Define tasks and jobs as if you are drawing a flow chart picking task components from a huge selection of prefixed patterns allowing complex job flows to be created with ease. Job flows and parameters can be exported into Excel® format to make any adjustments simple even for a large scale environment as well.

- **Workflow definition using GUI**
  - Example of Database Backup
    - Drag & drop

- **Operational Cost Reduction**
  - Reduces overall production costs by minimizing preparation and increasing productivity with simpler workflow for the operators.

- **Centralized Task Management**
  - View job flows and it’s progress in a list or drill down to check flow status and detailed logs when necessary.

- **Color Coded Job Status Enabling Glance Monitoring**
  - Monitor the overall progress by checking the changing icon colors each associated with a status message such as “DONE”, “DONE(ERROR)”, “RUN”, “WAIT” etc. The view can be sorted to chronological, layered or group ordering for easier navigation in identifying potential issues.
  - Basic commands such as “Forced Stop”, “Hold” and “Rerun” can be executed from this monitoring screen allowing swift recovery actions to be taken when necessary.

- **Gantt Chart Job Status Monitoring**
  - Allows administrators to compare the latest job progress to a pre-calculated estimated time based on past executions results. In an event of any delays being detected, alert pop ups and task cancellation can be set to prevent issues from growing any further.

- **Execution Progress Tracker**
  - Centralized monitoring lets you know job status at a glance, so you can discover and resolve errors right when they occur.

### Example of Database Backup

**Drag & drop Operation Overview**

Depending on the operational setup, the administrator can adjust and set required job flows with a fixed schedule allowing integrated monitoring at all times.

**Simple Task Defining**

- Automated Task Execution
- Integrated Job Progress Monitoring

**Job Flow Example**

- Job Flow Defining
- Schedule Driven
- Automated Task Execution

**Job Status Monitoring**

- Job Submission Manager
- Job Execution Server
- Code Check Process
- Data Receive Process
- Report Output Process
- Create Sales Report
- Combine Sales Data
- Receive Store Sales Data
- Request Store Sales

**Key Features**

- Execution Objects: conditional branches, repetition, parallel executions, operator validation...
- Hold Objects: file, time, event hold patterns...

**Centralized monitoring**

- Blue: estimated time
- Green: actual time

- **Conditional branching according to execution results.**
- **Conditional branching according to the calendar.**
- **Waiting for confirmation by an operator.**

**Solid track record from the numerous mission critical system installments in the past guarantees a high reliability performance within a distributed setup environment.**

**Execution Progress Tracker**

- Centralized monitoring lets you know job status at a glance, so you can discover and resolve errors right when they occur.
