

Transform retail from experience-driven to visual, collaborative agility.

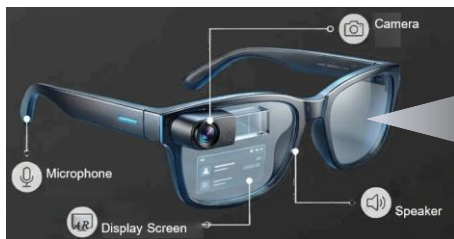

[Products/Solutions] Smart Retail Glasses

The smart glasses solution integrates a display and camera to enable task guidance, real-time video upload, and two-way communication. Employees access instructions and share live footage, while managers provide remote support. Powered by the cloud with virtual assistant and task alerts, it delivers efficient on-site execution and remote management—boosting retail productivity and operational consistency.

Explanation ①(Product Exterior & Structure Overview)

The Smart Retail Glasses are designed with a fashion-oriented, modern industrial look, supporting a unique “one-use-one-charge” hot-swap power solution, enabling continuous, uninterrupted operation during extended field use.

Its lightweight materials, ergonomic design, and replaceable battery architecture make it highly suitable for retail, inspection, and frontline operations.

■Keyword① Efficiency through Hands-Free Operation

By keeping both hands free, workers can perform tasks without interrupting their workflow or movements, significantly improving on-site productivity.

■Keyword② Quality Improvement through Standardization of Tasks and Instructions

Displaying work procedures and instructions uniformly on the screen eliminates reliance on individual expertise, enabling anyone to perform tasks with consistent quality.

■Keyword③ Advanced Capabilities and Visualization through AI/Cloud Integration

By combining real-time first-person view capture with AI and cloud technologies, on-site conditions are visualized, enabling remote advanced support and data-driven operational improvements.

Use case or Case study

- CaseA : Continuous store operation / long shifts
- CaseB : Remote support with uninterrupted video streaming
- CaseC : On-site inspection with hot-swappable batteries
