

# NEC's Next Generation Cybersecurity Service "CyIOC"

[ Products/Solutions ] Next Generation Cybersecurity Service

With Japan-quality security operations and extensive experience supporting 110,000 NEC Group employees, we integrate cyber intelligence and operations to strengthen global supply chain resilience.

## ■ Security Monitoring and Response to Support the Global Supply Chain

Centralized monitoring of the entire supply chain including headquarters, overseas offices, logistics and business partners. Immediate response to incidents that directly impact business continuity, such as ransomware and supply chain attacks. Support for compliance with international regulations and reporting requirements.

## ■ Anticipating Future Threats with Our Proprietary Threat Intelligence

Our dedicated Cyber Threat Intelligence team leverages NEC's proprietary intelligence to anticipate current attacks as well as potential future risks, enabling proactive defense before attacks occur.

## ■ Identifying true attacks among numerous alerts

Combining NEC's proprietary AI and playbooks, we automatically analyze about 90% of log data. Routine responses are automated, while analysts ensure only truly serious threats are notified.

### Use case or Case study

- NEC Corporation (In-house) : Utilizing a cybersecurity dashboard, we visualize attacks and risks facing the NEC Group and share this information with all related departments including managements. This enables faster decision-making and raises security awareness across the company.
