

Alliance for Joint Research and Development and Global Rollout of ICT Products Utilizing Innovative Optical and Wireless Technologies

President and CEO
Jun Sawada

President and CEO
Takashi Niino

June 25th, 2020

background

The background features a dynamic, abstract composition of glowing blue and red particles. These particles are arranged in fluid, undulating waves that sweep across the frame from left to right, creating a sense of motion and digital energy. The overall color palette is dominated by deep blues and vibrant reds, with the particles themselves appearing as bright, out-of-focus points of light.

Post COVID-19 Society

Realization of a Decentralized Society

- 5G, IoT, AI
- Digital Transformation

Rise of a New “Glocalization”

- Trusted Supply Chain
- Brand New Made in Japan

background

Expanding Trend of Open Systems

Open Architecture

• O-RAN Alliance

IOWN

Create a smarter society with the IOWN initiative that enables all people to benefit naturally and unselfconsciously from technology

Electronics to Photonics Digital to Natural

IOWN

Innovative Optical and Wireless Network

All-Photonics Network

Improvement of information processing systems

Digital Twin Computing

New world of services and applications

Cognitive Foundation

Optimal harmonization of ICT resources

Innovating communications technologies since its establishment in 1899
Promoting the fusion of network technology and IT

Improve communications infrastructure
in Japan and around the world
Create a new business model by co-creation

INNOVATION

Drive open architecture and innovation in the communications industry

Globally deploy cutting-edge technologies and competitive products that originate from Japan

Operator promoting development and
introduction of
cutting-edge technologies
Research and development capabilities

Sophisticated communications technologies,
digital technologies and
infrastructure-building experience

Drive open architecture and innovation in the communications industry
Globally deploy cutting-edge technologies and competitive products that originate from Japan

Promotion of Open Architecture Innovative Technological R&D

- Develop globally competitive products compliant with O-RAN specifications
- Joint development of a compact Digital Signal Processing (DSP) circuit with both world leading performance and low power consumption, as well as optical transmission equipment applying DSP
- Joint development of innovative technologies and optical/wireless devices contributing to the realization of the IOWN initiative
- Achieve greater capacity, higher functionality and lower costing submarine cable systems
- Achieve large capacity, low latency and automatic/autonomous space communication
- Achieve more sophisticated technologies to ensure infrastructure network security

Realizing the IOWN initiative and Improving the competitiveness of industry from Japan

- Play a leading role for open architecture
- Create innovative technologies and products originating from Japan and develop them globally
- Form a capital and business alliance for creating an amicable and cooperative relationship

Brand New Made in Japan

INNOVATION
